

### **C. Brake Master Cylinder with Fluid Reservoir Attached**

#### **Models 180, 180 D, and 220 α**

Installed in the following models:

Model	up to Chassis End No.
180	45 17418
180 D	45 12617
220 α	45 01933

This brake master cylinder is attached to the bracket by means of a hexagon nut and a lock washer. A brake master cylinder with separate fluid reservoir can only be installed subsequently if a new bracket is welded to the chassis base panel and if the stay rod, the compensating spring, and the return spring for the clutch actuating mechanism are replaced.
