

The following is an accurate account of the issues and outcomes of a crime committed April 27th, 2017 involving two "not so innocent" parties.

COMPLETED CASE FILE #207 9:22 AM

Charge: MANSLAUGHTER

VICTIM

ACCUSED

INCIDENT REPORT

April 27th, 2017 @ 9:22 AM..... report of the victim collapsing and being unresponsive on Interstate 805, Southbound in or near National City, CA 10:14 AM ... EMS services arrive at the scene, attempt resuscitation and immediate emergency care, patient was taken to a local Clinic (Onager's) for professional treatment. 11:12 AM Patient was pronounced DOA.

AUTOpsy Report

Victim: 57 year old, born 1960 in Stuttgart, West Germany. Emigrated to California USA with adopted parents at age one. Subject appears to be physically fit, well preserved for age, no decrepitness or cancer. Evidence of some vanity but no surgery. Life of relative leisure, never hauled or taxied, and not a world traveler (only 80,000 miles)

Medical History: Retired at age 42 and became completely inactive for over 15 years. Resuscitated back into service 5 months ago, heart problems, suspension problems, no ability to stop, all major organs tested and R&R'd, but no record of significant body injuries or surgeries.

DOA: Apparent *major failure* on April 27, 2017 @ 9:22 am Southbound Interstate 805, National City CA.

AUTOpsy Initial Findings: After careful inspection of internal organs and systems the following maladies were noted:

- lesions prominent in the head (cause still under investigation) no trauma or membrane damage,
- major blood loss which could have created low pressure
- significant de-hydration either causing or from excessive heat
- scoliosis and debris of the fuel liver
- See Attached **EXHIBIT A** of AUTOpsy photos

AUTOpsy Determination: The results were *inconclusive*, it has been deemed either *manslaughter* or *natural causes* Manslaughter by operator error. Fatal damage may have directly occurred due to operator aiding and abetting over-exertion. Operator may also have been negligent by allowing de-hydration thus creating excessive stress. Natural causes by creating marginal internal systems by prolonged inactivity and then stressing these frailties, resulting in total impairment.

CORONER's Recommendation: An arrest should be made. It is up the District Attorney to sort things out.

District Attorney's **INVESTIGATIVE REPORT**

After considerable man-hours dedicated to seeing justice served, the following relevant evidence has been gathered by D.A. investigators thru expert witnesses, extensive interviews, and further CSI lab work. The findings:

- radiator wept thru numerous ulcerated fissures, not enough to puddle when cool,
- water circulation failure, pump gasket and bearing failure suspected
- extremely low blood pressure, faulty pressure gauge, clogged arteries
- Operator was an idiot

Investigation Conclusion:

Death by *unnatural* causes associated with *overexertion* and an *inactive lifestyle*.

The facts suggest that *operator abuse/malfeasance* may have causal effects on *overexertion*. BUT evidence also supports that an *inactive life-style* was the cause. It is recommended that a **GRAND JURY** be convened to establish fault. The *arrested* has been remanded and bail hearing scheduled for 9AM. A public defender has been assigned to Case # 207 9:22

GRAND JURY

A grand jury was empanelled to secretly hear all testimony and answers to their questions After the Prosecutor's presentation of facts and the Defense's rebuttals, the jurors deliberated for 2 hours and 40 minutes. Returning with the following verdict:

In the matter of victim's death and the charge of manslaughter we find:

NOT GUILTYBut, *CULPABLE* for such *Supreme Stupidity* as to endanger and harm the old and feeble.
*With the recommended sentence of restitution by the accused.***

The arrested has been released, all charges dropped, BUT punitive damages \$'s are just beginning.

Moral: you can never be paroled for the crime of *stupidity*.
